SKILLS

SOC / Defensive Security

Wazuh SIEM

Log Analysis & Triage

Linux / Kali Linux

Python

Network Security

Wireshark

Burp Suite / OWASP

ACHIEVEMENTS

500+ day TryHackMe streak

3 industry certifications

Home Wazuh SOC lab

REFERENCES

Available on request.

PROFILE

Third-year Ethical Hacking & Cybersecurity student focused on SOC operations and threat detection. I run a home Wazuh SIEM lab, write custom detection rules and automate alert triage with n8n. Seeking SOC Analyst and cybersecurity roles and internships.

PROJECT EXPERIENCE

Wazuh to n8n SOAR Pipeline

Wazuh • n8n • Docker • Gemini

- SSH brute force alerts (rule 5712) sent to an n8n webhook and analysed by Gemini.
- High and critical alerts trigger a Gmail notification, then n8n calls the Wazuh API to block the attacker IP with firewall-drop and sends a confirmation email.

Home Wazuh SOC Lab

Wazuh • Ubuntu • Kali Linux • iptables

- File integrity monitoring, Rootcheck, SSH and system log collection.
- Firewall-drop active response for SSH brute force.
- Custom port scan rules mapped to MITRE ATT&CK T1046.

SSH Sentinel

Python • Tkinter • unittest

- Detects repeated SSH failures and classifies brute-force severity.
- Live journal monitoring, desktop GUI and automated unit tests.

Forensic Evidence Correlation (final-year project)

PCAP • Logs • Filesystem artifacts

- Correlates artifacts to reconstruct attack timelines with evidence traceability.

EDUCATION

BSc (Hons) Ethical Hacking & Cybersecurity

Softwarica College / Coventry University

2024 – 2027 (expected)

CERTIFICATIONS

- Fortinet Certified Fundamentals in Cybersecurity (June 2026)
- Introduction to Cybersecurity, Cisco Networking Academy (May 2026)
- Certified Cybersecurity Educator Professional, Red Team Leaders (Dec 2025)

PRACTICAL EXPERIENCE

- TryHackMe 500+ day streak: hands-on labs and CTFs.
- LetsDefend SOC challenges: Log4Shell and port scan PCAP analysis, phishing and Kerberoasting investigation.
- Forensics CTFs: memory forensics (Volatility 2 and 3), network and disk forensics (Autopsy).
- PortSwigger labs: SSRF, command injection, access control, race conditions.
